### Book Descriptions:

We have made it easy for you to find a PDF Ebooks without any digging. And by having access to our ebooks online or by storing it on your computer, you have convenient answers with 3m c960 installation manual . To get started finding 3m c960 installation manual , you are right to find our website which has a comprehensive collection of manuals listed.

Our library is the biggest of these that have literally hundreds of thousands of different products represented.

## Book Descriptions:

### 3m c960 installation manual

CrossLane Wiring Diagram All Rights Reserved. St. Paul, MN 551441000 78691206730 Rev C. The publishing dates for the front matter, individual sections, and separately published documents are as follows. It is designed to provide two-way, radiofrequency audio. The menu sign. It consists of one base station and one or vehicle alert system provides a signal to the base more headsets and battery chargers. It is Microphone Boom Assembly replaceable as a separate unit. Speaker Assembly Speaker Assembly Rechargeable Battery The speaker assembly is housed between the inner The nickel metal hydride battery provides DC power and outer cases and is replaceable as a separate unit. For this reason, the accompanying base station diagram To the monitor speaker amplifier via the MON provides no circuit component detail. Refer to the C960 Installation Instructions for more information. Configuration Switches RESET SWITCH Very briefly, actuation of the. The auxiliary intercom may be a conventional, hardwired intercom or it may be a second C960 base Monitor Speaker Audio Control station. Relay contacts K303B control distribution of monitor External system components speakers, microphone, speaker audio. Install the battery charger in a clean, dry environment. An office location is best. Refer to the installation instructions that are packaged with the assembly. Base Station 1. If a separate outside microphone is used, the auxiliary intercom must be configured for OUTSIDE MIC. These instructions are also located in the C960 Service Manual. A CrossLane Module can be useful if the manager wishes to operate each lane with a separate crew during periods of peak activity. It does not matter which base station is used to program the headsets. By pressing T1, the headset will always communicate with the lane 1 base station;. They also control which headsets to PAGE to <http://cuacuonanbinh.com/userfiles/combat-heater-manual.xml>

Also, each of the headsets in the system must be reprogrammed when a jumper setting is changed see Channel Selection on page 14 for the headset programming procedure. Microphone Lane 1 System Jumper pins 1 and 2 of jumper J3. Air Switch Pulse Detector Jumper pins 1 and 2 of jumper J4. Setting Audio Levels To set the audio levels, refer to the related audio level procedure below and to the illustration of the base station circuit board Figure 14. Monitor Speaker Volume Levels The monitor speaker volume levels are the levels for the various functions heard through the optional monitor speaker. Base Station Circuit Board Jumpers J1 and J2 Set for the type of menu sign in the system. Jumper pins 1 and 2 on both jumpers for menu signs having a speaker only. Jumper pins 2 and 3 on both jumpers for menu signs having a speaker and a microphone. Adjustment Controls Controls the volume of the menu sign audio heard in the headset. MENU MIC SENS Controls the volume of the alert tone heard in the headset. Part Number Description Qty. 78691144923. HEADSET ASSEMBLY, Model C920AC. Part Number Description Qty. 78809505809. 3SLOT BATTERY CHARGER ASSEMBLY, Model C923AA. Part Number Description Qty. 78809505817. 6SLOT BATTERY CHARGER ASSEMBLY, Model C926AA. See Figure 32. Tools Required 3. Remove the outer case and the two keypads Phillips screwdriver and set them aside. See Figure 32. See Figure 33. Phillips screwdriver 5. See Figure 33. Tools Required 4. Lift the battery release button spring out of the retainers in the housing. Possible causes are listed in the order in which they are most likely to happen. The intercom. plug in its power transformer. C960 system works OK. 3. The volume controls are set too 3. Turn the volume controls up. See Figure 41. Figure 42. Figure 41. 3.

When the test is complete, the word READY will flash on the LCD. 2. Turn the battery charger ON. The analyzer will. However, three components Components are common to all system configurations. <http://eduteklabs.com/userfiles/combat-flight-simulator-manual-pdf.xml>

The base station is the interface between the customer at the menu sign and the Base Station headset worn by the operator. With the switch in the DAY position, the volume of the menu sign speaker is 3 VOLUME increased for daytime operation. Insert a dime in the slot on the headband pad housing and twist the dime to release the tab. Band Clip Figure 11. 5. Slide the cap clip over the inside half of the adjustable headband until it snaps into position over the headband pad mount. See Figure 12. Check to see that the POWER indicator lights. This mode is available with all system configurations. To page another operator, press and hold the page switch. Release the page switch to listen. To return to normal headset operation 1. Turn the headset OFF. 2. Turn the headset ON. It is important to remember that an unused C960 battery loses five percent of its charge per week. If a batteries has not been used for several weeks, make sure to charge prior to use. See Figure 16. 2. Twist the dime to release the tab. Battery Charger Location The battery charger should be placed on a flat surface such as a desktop or table in a clean, dry environment. To help protect the environment, C960 rechargeable batteries which have Disposing of Batteries reached the end of their useful life should be disposed of in accordance with local requirements. In some cases, changing channels may have no effect. You can correct these types of interference by changing the base station operating channel. If the system has an optional monitor speaker, adjust its volume using the. Possible causes are listed in the order in which they are most likely to happen. The intercom. plug in its power transformer. C960 system works OK. 3. The volume controls are set too 3. Turn the volume controls up. Paul, MN 551441000 postconsumer waste paper. 78691206714 Rev. G. The A121 will not function with an intercom system configured to use a single speaker as both the microphone and speaker.

The LED can be off, blink at defined intervals, or be constantly lit. Table 3 illustrates the status indicated by the LED. System Requirements The 3M A125 Noise Reduction Module requires a C921BA Base Station. The LED can be off, blink at defined intervals, or be constantly lit. Table 3 illustrates the status indicated by the LEDs. With the exception of mounting, both circuit boards are the same. The Model A200 Loop Detector comes with a 12VDC plugin power supply and is designed as a standalone loop detector. Be careful that the C921BA circuit board does not fall out of the plastic base. Four levels of sensitivity can be set with S11 and S12. The delay time is set with S13. The operating mode is set with S14. The music will resume playing at the menu speaker 2 minutes after the vehicle detect signal is disengaged. Note Use this feature only with the 3M C921BA Base Station. When SW2 number 8 is OFF, the A300 message will be heard through the menu microphone while the message is being played through the menu speaker. A headset with a DualLane Remote Switch can communicate with either base station in a crosslane installation via the lane select switch. The CrossLane Module allows the headset to receive the vehicle alert tone and audio from a base station that the lane select switch is not set to. One base station must be jumpered pins 1 and 2 for lane 1 operation; the other base station must be jumpered pins 2 and 3 for lane 2 operation. Paul, Minnesota 55144 1000 postconsumer waste paper. Paul, MN 551441000 postconsumer waste paper. 78691205096 Rev. A. The communication bar can be mounted in one of two locations On the outside wall of the building next to the facetoface window. See Figure 2. For facetoface window mounting, position the housing with the microphone at the bottom. Note The wire exit hole in the housing is sized to accept a 1inch conduit fitting. 8. Food Services Trade Department Printed in U.S.A.

Connecting Components to the Interconnect Module. Figure 1. Typical Installation. Material Required not supplied Important Install the battery charger and begin charging the batteries before you install any other components. Install the battery charger in a clean, dry environment. An office location is best. The battery charger may be placed on a flat surface such as a table, desk, etc., or it can be fastened to a wall using The three green lights on the battery charger will turn on. To charge a battery, plug it into the charger as shown in Figure 2.

<https://academyocgc.com/images/canon-kiss-digital-x-manual.pdf>

Observe the charging status indicator next to The indicator lights RED to indicate the battery is charging. The indicator lights GREEN to indicate the battery is fully charged. This repeating tone continues for two minutes. Standard Systems. Duplex Systems Base Station At least 3 feet from large metal objects such as refrigerators, ranges, coolers, etc., and other metal or Important. Do not mount base station under steel countertops, within 3 feet of Figure 3. Base Station Mounting Holes Keep the transformer cable at least 6 inches from the left half of the base station. This half contains sensitive An 18 inch cable is provided to connect between the base station and the programming station. Important. Allow enough room below the programming station to allow insertion of the Do not mount programming station too Figure 4. Programming Station Mounting Holes Important Module. Connect the base station to the interconnect module as shown in Figure 6. Note that the connections are made to Supplied with Duplex Mic. Figure 7. Connecting Components to the Interconnect Module The presence alert shown is wired to operate only when the Model C1060 is turned off. If a separate outside microphone is used, the auxiliary intercom must be configured for OUTSIDE MIC. Refer to the Auxiliary Intercom Installation Instructions for information about moving any internal jumpers. Dual Lane System Installation. A dual lane system consists of two separate single lane systems that operate independently of each other. Each To install a dual lane system Important. Base station models C921 and earlier must be mounted at least 25 feet apart. Base station models C922 may be mounted as close as 2 feet apart. This designates the base station as a lane 1 system. Important. Do not set both base stations to the same lane number as this will cause Cross Lane System Installation. The Cross Lane system provides communication for facilities that have two menu signs.

Naturally, we want to help you do the same for yours. We are ready to help keep your drivethru running smoothly, efficiently, and safely. Thank you for your continued business and allowing us the opportunity to serve you and your teams. Our technicians thoroughly check, repair, and upgrade to ensure likenew operation. Your purchase of these products includes a 4month warranty. Please note that all refurbished items are subject to equipment availability. Advance Exchange Available. If not, proceed to program the C960 or C1060 headset. If all headsets fail to program or experience static, the base station may need to be replaced. Reinsert the power supply and allow the base station to initialize. Reprogram all headsets to the new channel. Reinsert the power supply and allow the base station to initialize. If this is ON, toggle it to OFF. Reinsert the power supply and allow the base station to initialize. If this is ON, toggle it to OFF. Reinsert the power supply and allow the base station to initialize. If this is ON, toggle it to OFF. Verify that all wires on the phoenix connectors are docked securely. Reinsert the power supply and allow the base station to initialize. If this is ON, toggle it to OFF. Please do not factory reset a G5 base unless you are conferenced in with 3M on the line as they may end up giving you the code to enable both lanes or theyll replace the base. If the issues persists on the same communicator after testing all clean and charged batteries, proceed to replace the affected headset. If the green indicator light flashes briefly and then goes solid, registration is complete. If the issues persists on the same communicator after testing all clean and charged batteries, proceed to replace the affected headset. Press the ENTER button. Press the ENTER button. When the green indicator light stops flashing and goes solid, the headset is successfully registered. Remove any HS that are no longer in use if the registration list is completely full.

Make sure to hit the enter key on each space where a headset was removed, make sure you soft reset of the base station after the entries have been deleted. Attempt registration of headset after. The headset light should flash red and turn off. You can then attempt registration once more. Change NO to YES and press ENTER on next screen to restore the base to default settings. Clean contacts with an eraser or alcohol swab, if needed. Remove the battery from the assembled headset. A new message at the bottom of the screen should display if done correctly. One at a time, insert the battery back into the headset while watching the LED on the headset. Repeat powering on units until all have been registered. From the registration menu, select option 3. Change NO to YES and press ENTER on next screen to restore the base to default settings. Clean contacts with an eraser or alcohol swab, if needed. Page Count 4 System Requirements The 3M A125 Noise Reduction Module

requires a 3M model C921BA or C922AA Base Station. Installing the Noise Reduction board into the 3M Base Station 1. Remove the righthand and lefthand top covers from the 3M base station. Plug the A125 ribbon cable onto connector J8, located at the top of the left side of the circuit board. Be careful to support the rear side of the base station circuit board when plugging in the A125 ribbon cable. 3. Position the holes near the edge of the A125 circuit board over the plastic standoffs on the base station. 4. Attach the lefthand base station cover after configuring the A125 board, and performing the Final Checkout Procedure. Install the A125 board here Figure 1. Mounting the A125 to the C921BA Base Station The wider ribbon cable plugs are too wide to fit into the blue 20pin base station receptacle. The receptacle on the wireless base station board must be trimmed and the ends opened. Use a sharp razor knife and make four vertical cuts. Fold the ends of the blue receptacle down as shown below.

Caution Be careful to not cut any components or circuit traces on the base station circuit board. Caution Be careful to pull only on the ribbon connector plug. Pulling on the ribbon cable itself may cause it to separate from the plug. Instructions for trimming and opening the base station receptacle 1. Make a vertical cut at each corner of the blue 20pin receptacle on the base station circuit board. 2. Fold the short end sides down as shown 3. Carefully insert the ribbon cable plugs into the blue receptacle. The locking tab will not engage and should not be a problem. Noise Reduction When DIP Switch number 1 ON the inbound microphone voice signal is digitized. On digitized, the noise is digitally removed from the voice by the digital signal processor and converted back to an analog voice signal. The analog voice signal is then sent to the microphone input of the intercom. When DIP Switch number 1 is OFF the inbound microphone voice signal is digitized and converted back to an analog voice signal without removing any noise. The analog voice signal is then sent to the microphone input of the intercom. Echo Reduction Used to reduce echo for full duplex intercom configurations. Turn Echo Reduction OFF for half duplex intercom configuration. When DIP Switch number 3 is ON, the board is set for truck stop noise reduction level. This provides approximately 6dB more noise reduction with slightly more voice degradation. Hi Frequency Equalization When DIP Switch number 4 is ON, the higher end frequencies are increased by 3dB. This should be set to the customer's preference. The LED can be off, blink at defined intervals, or be constantly lit. Table 3 illustrates the status indicated by the LEDs. The red LED should blink slowly. Listen for a reduction in the background noise. 2. If the A125 is in a half duplex system, set SW2 number 2 OFF and proceed to step 3. If the A125 is in a full duplex system set SW2 number 2 OFF. Speak into the headset microphone.
