Travis H. 4.0 out of 5 stars Works so much better and is hotter and more efficient with a new wick. This round 3 weeks into using new one I have learned to dry burn it once a week and use additive. From researching I have found main ingredient in additive is alcohol. So I also researched

how much rubbing alcohol to use as a replacement additive much cheaper and from my experience cuts smell down and has been safe. The ratio is basically the same as the additive ratio. Make sure to use 90% rubbing alcohol though.

This wick so far has lasted a bit longer than a previous one I had in there. I will order more of these as they are a quality product. This is most of the KeroSun and Toyostove line Hold your Mouse Pointer over picture for instructions, then click to Find your Wick Number and if All rights reserved. Information in this document is subject to change without notice. Other products and companies referred to herein are. Also consult the manual to know how often to replace the heater's wick, what type to buy and how to install it. Turn it off and wait for it to cool completely before moving it. Make sure its off and completely cool before adding more kerosene. Be sure kerosene, funnels and lighters are all stored safely out of their reach. Today's heaters have a variety of safety features, including instant shutoff if the unit is bumped or tipped over, an attached overspill tray and a battery operated startup function that eliminates the need to use an open flame when lighting the unit. Remove the fuel tank cover, which on some models is attached by a chain. Place the funnel firmly into the opening and pour kerosene in slowly, allowing the funnel to drain completely before adding more. Stop filling when the needle barely reaches the fill line. Replace the fuel tank cap, and completely wipe off any kerosene that dripped or leaked from the funnel or the kerosene can. Dispose of the newspapers and rags that soaked up any fuel. This will allow for an adequate exchange of air and will vent any fumes out of the room. Leave the window open while the heater is on. Lift the front of the wick ring up, then wiggle it from side to side a few times to allow the kerosene to saturate the wick. Click the electric ignition, and watch until you see a small flame below the wick. On models with no electric start, lift the wick ring up and insert either a long, lighted match against the wick, or insert the end of a butane lighter.

<http://afreecountry.com/?q=node/3634>

Click the lighter on, and watch for a small flame under the wick. A small amount of black smoke escaping from the top of the heater is normal and should subside quickly once it heats enough to burn off the gases. To turn off the heater, click the instant shutoff lever, then turn the heat control knob all the way to the left. Lovejoy graduated from the University of Southern Maine in 1996 with a Bachelor of Arts in English. Show Comments. If your heater wont stay lit, releases soot or smoke, or a bad odor, usually a new wick will make it burn like new. You can troubleshoot common problems in our reference chart. If you need more detailed information to make your kerosene heater burn like new, visit our Kerosene Heater Reference Manual. Make sure you align the new wick straight and place the chimney on properly. Allow the new wick to soak for at least 30 minutes before lighting, and always burn clear K1 kerosene if possible for the best results. Ordering a new wick is easy. Look up your heater on our reference chart then go to our On Line Store and place your order. We accept

Mastercard, Visa and Personal Checks. All orders are usually shipped within 24 hours. If you need igniters, chimney glass or other parts, please email us with the make and model of your heater and the part you need. Multiple instore pickup orders arent currently supported. To help ensure you always have enough heat, shop our assortment of top-rated heating products like kerosene wick replacements.

Learn what to look for when shopping for a new kerosene wick, how to clean and maintain your wick, and when to replace your kerosene wick with this helpful information from your friends at Ace. Types of Kerosene Heater Wicks The best heater wick for you should match your kerosene heater model. Since a wick that's too thin for your heater could allow excess kerosene vapors to pass through the wick gap and result in a burning smell, it's important to find the right size to adequately fit your heater. Look for a wick replacement that fits your specific kerosene heater model. If your model isn't listed in our product descriptions, try measuring your current wick to determine which replacement size you'll need to order. A quality kerosene wick provides good fuel draw and longlasting burning. Ace Hardware carries top-rated kerosene wicks from popular brands like American Wick. Each kerosene wick in our inventory is designed to offer Easy installation. Efficient

heater performance. A cleaner burning experience. Reduced carbon buildup. A higher degree of safety. Tips for Handling a New Kerosene Heater Wick When using a kerosene wick for the first time, allow it to soak completely before the initial ignition. In a full tank of kerosene, soak the wick for at least an hour in the down position. Perform the same process during each kerosene heater wick replacement or any time the wick burns dry. How Often Should You Replace Your Kerosene Wick. Recommended kerosene heater wick replacement is at least once a year. However, to keep yourself safe, you should replace the wick more often if The wick appears thin and ragged. The wick burns with a ragged flame. Your heater is difficult to start. Tar or carbon deposits are visible just below the top of the wick. Youve frequently used lowquality kerosene. Youve operated your heater on a lowerthanrecommended setting.

How to Clean a Kerosene Heater Wick A kerosene wick thats saturated with water from lowgrade kerosene or that has too many tar deposits wont burn efficiently. The best time to clean a wick is right after a dry burning. Burn the wick dry and clean it in these simple steps Shut off your heater and allow the unit to cool. Remove all kerosene from the tank, and advance the wick to its fullest length. Light the wick and allow it to continue to burn until the flame goes out completely. Using a brush or comb, carefully remove carbon deposits from the surface of the wick. If youre unable to remove the tar or carbon deposits, purchase a replacement wick. Where to Find Kerosene Heater Wick Replacements Shop Ace Hardwares inventory of kerosene heater wicks online or instore today. We carry everything you need to keep warm and cozy all season long, including kerosene heaters and premium kerosene fuel. The ceramic elements are in contact with aluminium fins, thereby heating the fins up. The ceramic, on the other hand, increases its resistance sharply at the Curie temperatures of the crystalline components, typically 120 degrees Celsius, and remains below 200 degrees Celsius, providing a significant safety advantage. By using this site, you agree to the Terms of Use and Privacy Policy. Try Our Guided Tour to get you started. Register Now Explosions could be caused by use of the wrong kind of fuel, or by operating the heater in an area where there are combustible fumes. Children especially should be kept at a safe distance from operating heaters. Even pets could be injured. If they are operated in a small room or in an inadequately ventilated area, oxygen in the air could be reduced to a dangerous level. Reduced

oxygen supply could lead to incomplete combustion of fuel and the production of carbon monoxide.

Carbon monoxide is a colorless, odorless gas which in sufficient concentrations, or if breathed over a period of time, can kill without warning. In addition to carbon monoxide, kerosene heaters can emit such pollutants as carbon dioxide, nitrogen dioxide and sulphur dioxide. Breathing these substances can create a risk, especially to such people as pregnant women, asthmatics, individuals with cardiovascular disease, elderly persons and young children. Before you buy one, check your local fire department or fire marshal for any restrictions on use in your area. Its fuel tank is located below the wick and combustion chamber. The wick absorbs and delivers fuel to the combustion chamber. They're designed for large areas or even several rooms, but never for a small, closed area such as a bedroom. Some owners report that one or two of these units can adequately heat an entire house when the temperature stays above freezing. Generally, refueling is done with a siphon pump. Be sure a convective heater has a fuel gauge. They also feature a wick and combustion chamber and have, in addition, a reflector which directs heat at people or objects. Some radiant heaters have electric fans to increase the flow of warm air. Only the fuel tank needs to be carried to where the fuel is stored. The UL label means the heater has performed well under test conditions and meets acceptable fire safety standards. But you might notice a faint kerosene odor when you enter the house. Thus, it's a good idea to check the fuel gauge regularly. If it's dirty, clean it according to the manufacturer's instructions. When colored or cloudy kerosene is burned, it will give off an odor, smoke and cause increased indoor pollution levels because the fuel's higher sulphur content sharply boosts sulphur dioxide emissions. And kerosene other than 1K grade can gum up the wick. Never use a substitute such as gasoline or camp stove fuel. In a kerosene heater, such fuels could start a fire or explode.

Even a carrying handle could cause a burn. Extinguish the flame and allow the heater to cool before moving it. Wait for it to cool. It's better to use your central heating system while the family is sleeping. Never use a gasoline can as a substitute for a kerosene container. If there's no garage, a basement location distant from the central heating system or an outside storage shed are possibilities. And never smoke during refueling. Cold kerosene expands in a heater tank as it warms to room temperature and could overflow if there isn't enough room. Return the heater to the spot where it will be turned on. Open at least one window slightly and ignite the heater according to the manufacturer's instructions. Kerosene can change chemically and spoil over the summer. If it's worn out, replace according to the manufacturer's instructions. Store good batteries in a dry place, taping the ends. Never use kerosene from a previous heating season it could have spoiled.
